

# SOLUTIONS

## Secure your clients' sensitive information

BeavEx moves over 40% of the nation's checks every night. Our *Accountability Suite* scanning solution, with extensions into mailrooms and proof centers, closes the custody loop. Our operational model is measurement-based and emphasizes inspection and certification. Together, we have a world class risk program that has the best security record in the industry.

Total Source is an enterprise transportation solution that leverages our national network and service management platform to provide a single portal for all items moving to and from your branches.

## Consolidate deliveries to reduce branch distractions

The average branch receives 5-10 deliveries per day. Multiple vendors deliver office supplies, bank forms, loan documents, marketing materials, third-party accountable mail, interoffice mail and records, costing each branch up to 45 minutes. As check volume declines, BeavEx can consolidate this freight around its existing schedule to save you time and money. Imagine: a single delivery at fixed cost every day regardless of the freight: post office, FedEx, office supplies, forms, marketing materials, signage, computers. Our distribution centers support retention, retrieval and destruction of all records, including imaged checks and IRDs.

## Control costs and improve performance management

We offer a complete set of management services that maximize your control over spend. Our *Advantage Customer Center* provides daily issues tracking, change management, special ordering, and reporting across the network. Project consultants work with you to optimize your network, manage the integrity of your route database, and balance the needs of retail and items processing. Invoice audit and review ensures accuracy and minimizes errors. *ASMail* technology supports outsourced mailroom management. A dedicated account team coordinates the flow of information between our teams and provides the oversight necessary to manage enterprise wide relationships.
